Control Panel Design and Build / UL 508A Panels

from Erie Bearings Co.

EB Controls - Our UL 508A industrial control panel building division of Erie Bearings Company - EB Controls offers both high volume control panel solutions for OEM's or custom "design-and-build" of "one off" highly engineering control panel solutions. We can also create a production schedule to fit your budget and meet your deadlines. Ask your sales representative for additional information.

As a UL508A Control Panel Shop you can rest assured that EB Controls standards and practices adhere to the third party standards of UL.

UL 508A: the most widely accepted standard for control panels in North America.

The UL Listing mark on an industrial control panel (ICP) provides evidence to satisfy the increasing number of inspection authorities requiring third-party safety certification and your customers demanding the same. The UL Listing mark may be applied to a wide variety of designs, ranging from one-of-a-kind panels to standardized designs with only minor variations.

"We believe our #1 job is to provide "Best in Class" service and support that leads to real cost savings for you—our valued and prospective customers.

While many suppliers "talk" about offering Cost Savings Documentation, at Erie Bearings Company, our approach is different from most—our approach to Cost Savings is technical in nature. Our advantage is derived from our skilled team's knowledge level that allows us to offer both electrical and mechanical solutions using many of the leading products and brands listed on this line card.

This means that our customers enjoy real electrical and mechanical cost savings solutions that are born out of working closely with our sales team, engineers, technical specialists, and you—our valued customers.

At Erie Bearings Company I'm most gratified when our team provides a cost savings solution that results in significant, ongoing operational cost savings to a problem that hasn't yet been recognized by our customers."
