

Modulevel pneumatic liquid level controls are displacement actuated level sensors that provide output signals in direct proportion to changes in liquid level.

Simple modular design and the Magnetrol proven magnetic coupling make Modulevel controls versatile, highly stable, vibration resistant and adaptable to extremes in temperature and pressure.

Features

- Standard models handle service temperatures from -150° to +700° F (-101° to +371° C) and pressure to 4265 PSIG (318 Bar).
- Stable output signal is unaffected by surface turbulence. Prevents control valve "hunting" and extends valve life.
- Controller head may be removed without disturbing pressure boundary. Permits service or replacement without shutdown of process.
- Simple calibration prior to installation, by substituting weights for displacer or by controller head calibration with displacer.
- Accurate output signal provided over a wide specific gravity range.
- Controller head rotates 360°, simplifies pneumatic piping hookup.

- 316 SS displacer and trim. Inconel & 316SS range springs.
- Easily calibrated without moving tank liquid level, for reduced installation time and cost.
- Pilot relay provides a 4 to 1 amplification of pilot pressure signal to speed value response.
- Built-in visual level indicator is independent of air supply.
- Optional pneumatic-tocurrent interface transducer for use in electronic control applications.
- Optional proportional plus integral control.
- Optional differential gap (on-off) control.
- Optional High-Low electronic alarm signal provides inexpensive backup alarm.
- Fabricated construction.

Applications

Modulevel pneumatic liquid level controls are widely used in utility power generation, chemical and petroleum processing operations, such as:

- Steam generator feedwater heater regulation
- Fractionating column level transmitter
- Ethanolamine level transmitter
- Vent gas scrubber level control
- Drip pot condensate level control
- Flash tank level transmitter
- Boiler level control

Modulevel[®] Pneumatic and APM Liquid Level Control

Principle of operation

The key elements of the Modulevel pneumatic control are the magnetic coupling, which allows the controller to be mechanically isolated from the sealed sensing unit; the range spring, which dampens the action of the displacer; and the controller head, which provides a modulated pneumatic signal in direct proportion to the input from the vertical motion of the displacer.

As the liquid level in the vessel increases or decreases, the buoyant displacer rises or falls. This motion, dampened by the action of the range spring to prevent response to the rapid fluctuations of turbulence, is mechanically coupled to an attractor ball, within an enclosed tube.

A magnet encircling the tube follows the attractor ball, transferring the motion to a rotating cam, which in turn operates a flapper against a nozzle which increases or decreases the pressure within the pneumatic relay. The output pressure signal can be used in a variety of ways to operate a control valve or signal to alarms, indicators, process controls or other devices.

With optional integral control, the pilot nozzle proportional signal is conditioned through an additional metering valve system, which will eliminate offset from the desired control point.

Specifications

Des	scription	Specification		
Process	oressure	Up to 4265 PSIG at 100° F (Up to 318 bar at 38° C)		
Process temperature		Stainless steel cage -150° to +700° F (-101° to +371° C)		
FIUCESS	emperature	Carbon steel cage -20° to +700° F (-29° to +371° C)		
Specific of	gravity range	Minimum: 0.11 Maximum: 2.20		
Interface	detection	Minimum difference of 0.10 specific gravity between liquids		
Process	connections	NPT, Socket Weld or Flanged		
Supply p	ressure*	250 PSIG (17 bar) max. to regulator Instrument quality air (clean and dry) Regulator set to 5 PSIG (.3 bar) above maximum output.		
Output signal	Proportional & transmitter	3–15 PSIG, 6–30 PSIG		
pressure	Differential gap	0–20 PSIG or 0–35 PSIG		
Visual Ind	licator	% Span		
Level rang band adju	ge & proportional ustment	Limited only to displacer length. From fractional inches to 10 feet (3 meters).		
Air consu	mption	3 SCFH at 9 PSIG output 6 SCFH at 15 PSIG output		
Response	e speed	100 cu. in. output volume in 3.2 sec. upon an output pressure increase from 3–15 PSIG.		
Wetted p	arts	Trim: 304 or 316 SS Spring: 316 SS or Inconel Chamber: Carbon steel or 316 SS		
Control a	ction	Direct or reverse		
Modes of operation		Proportional control, Differential gap, Transmitter		
Housing		NEMA 1, 2, 3, and 3R		
Limit swit	ch ratings	Max. voltage: 120 VAC/VDC Max. resistive load: 10 VAC/VDC Max. current: 1/4 amp switching 1 amp holding		

*Maximum supply pressure with customer supplied regulator is 100 PSIG (7 bar).

Options

Consult the factory when ordering any of the options listed below.

Filter regulator and gauge

Modulevel instruments require filtered air of the correct pressure for operation. Filter regulators may be either field or factory supplied. Filter regulators and gauges are ordered as separate items using the part numbers listed below:

Filter Regulator	06-9501-002
Gauge	06-9501-003

Adjustable hangar

An adjustable stainless steel suspension cable is available for flanged top-mounting models. Standard length cable is 8 feet (2.4 meters). A cable is ordered as a separate item using the part number listed below:

Adjustable hangar 32-3110-001

Special process connections

Special process connections are available for retrofit applications.

Gauge glass tappings

Gauge glass tappings are available on all caged models. Specify the location and distance between the tappings when placing an order.

P/I converters

P/I converters are available on all Modulevel controls. These units can provide a 4-20 mA or 10-50 mA two-wire output signal from the Modulevel transmitter's input air signal of either 3-15 PSIG or 6-30 PSIG.

Mounting arrangements

Top Mounted APM-131

Flanged top P51, P61 and P62 displacer models

For mounting on top of the tank, flanged top models are available. They are used extensively in interface control applications where non-standard size displacers become necessary. An adjustable stainless steel displacer suspension cable is also available. Top mounting models are directly interchangeable with the external cage models. Choose from carbon steel or stainless steel models. A heavy duty model, suitable for pressures up to 4265 PSIG at +100° F (318 bar at +38° C), is also available.

When mounting inside the tank is possible,

threaded top models are the answer. An

adjustable stainless steel displacer suspen-

sion cable is provided as standard.

P61 Flanged Top Model

Top Mounted APM-131

External cage P53, P55, P63, P64, P65, P66, P71 and P72 displacer models

External cage models can be easily isolated from the process for maintenance and inspection operations. The modern in-line design eliminates the need for specifying right hand and left hand. Any mounting position is possible by rotating the instrument head. A variety of models are available including sealed or flanged cage with either side/side or side/bottom connections. Choose carbon steel or stainless steel models. Heavy duty models, suitable for pressures up to 4265 PSIG at +100° F (318 bar at +38° C), are also available.

External cage APM-W251, APM-W254 and APM-W291

External cage models can be easily isolated from the process to simplify maintenance and inspection operations. Sight glass and Trycock tappings are provided.

Side mounted P68 float model

Side mounted models are ideally suited for narrow level range applications. Carbon steel models are available with either a 3" NPT threaded body or a 4" flanged connection. This model is suitable for pressures up to 800 PSIG at +100° F (55 bar at +38° C).

Modulevel[®] pneumatic instruments

Modulevel pneumatic instruments are available in a variety of functions and styles to handle different application requirements.

Proportional

Proportional instruments are used to maintain the level in a tank within a predetermined band. The output from the Modulevel head controls the opening and closing of a valve to control the increase or decrease of the liquid flow through the vessel.

Transmitter

Transmitters are adjusted for full level range operation and signal the current liquid level. The signal can be fed to a variety of devices as the application requires.

Transmitter/Receiver controller

There are two devices in this version. The first is a transmitter which senses the level directly at the vessel and provides a 100% of span signal to the receiver/controller. The receiver/controller operates in the same manner as a direct connected level device, such as a proportional controller, which allows varying the proportional band and level set point. This unit may be mounted either integrally next to the transmitter, or at a more convenient remote location.

Electric limit switches

Electric limit switches allow high and low alarms to be added to any of the pneumatic instruments described above.

Interface detection

Modulevel controllers can be factory calibrated to detect the interface between two liquids if:

- 1. There is a minimum difference in specific gravity of 0.10.
- 2. The interface line between the two liquids is kept within the length of the displacer.
- 3. The displacer is constantly submerged in liquid.

Consult the factory when specifying units for interface applications. The specific gravity of both liquids must be supplied at the time the order is placed.

Proportional integral

Proportional integral instruments (i.e., with reset) operate in the same manner as the proportional with one major difference. The offset between the desired level and the actual process level is eliminated; thus, maintaining the level at a specific point rather than within a band.

Differential gap

A differential gap instrument provides only two distinct outputs; either, fully opened or fully closed. One distinct output value is obtained when the level exceeds the upper switching point. This output remains constant until the level decreases below the lower switching point. At this time the controller changes to another distinct output value. The new value remains constant until the level again rises above the upper switching point; causing the output value to return to the first output value. The distance between the two switching points is called the differential gap.

Direct acting

As the level increases, the pressure increases in direct acting pneumatic instruments.

Reverse acting

As the level increases, the pressure decreases in reverse acting pneumatic instruments.

Expedite ship plan (ESP)

Many standard Modulevel pneumatic level controls are available for quick shipment, usually within one week after factory receipt of a purchase order, through the Expedite Ship Plan (ESP). Models covered by ESP service are conveniently color coded in the selection data charts which follow. To take advantage of ESP, simply match color coded model number codes and options (standard dimensions apply). ESP service may not apply to orders of ten units or more. Contact your local representative for lead times on larger volue orders as well as other products and options.

Selection data

Modulevel controls are identified by a ten digit alphanumeric model numbering system. The model number describes model configuration, materials of construction, level ranges, and other options vital to the performance and function of the instrument.

Example: P63-5C5A-PAA

All Magnetrol mechanical level and flow controls are warranted free of defects in materials or workmanship for five full years from the date of original factory shipment.

If returned within the warranty period; and, upon factory inspection of the control, the cause of the claim is determined to be covered under the warranty; then, Magnetrol will repair or replace the control at no cost to the purchaser (or owner) other than transportation. Magnetrol shall not be liable for misapplication, labor claims, direct or consequential damage or expense arising from the installation or use of equipment. There are no other warranties expressed or implied, except special written warranties covering some Magnetrol products.

Quality assurance

The quality assurance system in place at Magnetrol guarantees the highest level of quality throughout the company. Magnetrol is committed to providing full customer satisfaction both in quality products and quality service. The Magnetrol quality assurance system is registered to ISO 9001 affirming its commitment to known international quality standards providing the strongest assurance of product/service quality available.
