

PURE SILICONE FLUIDS (standard viscosities)

CAS # 63148-62-9 Viscosities: 50cSt, 100cSt, 200cSt, 350cSt, 500cSt, 1,000cSt

Pure Silicone Fluids are linear 100% polydimethylsiloxane fluids (CAS # 63148-62-9)

Standard Viscosity Pure Silicone Fluids are linear 100% Polydimethylsiloxane Fluids (CAS # 63148-62-9) that range in viscosity from 50cSt (centistokes) to 1,000cSt.

These fluids are characterized by their medium viscosity, wide service temperature range, low V.T.C. (little viscosity change at both low and high temps), high damping action (meet VV-D-1078 Silicone as damping fluid), excellent lubricity for rubber and plastics, high dielectric strength, high resistance to shear, and high resistance to oxidation.

The Pure Silicone Fluids are compatible with virtually all o-rings, gaskets, valves and seals with the exception of silicone o-rings*.

Pure Silicone Fluids are Thermally Stable, showing excellent stability in low and high temperatures applications for long periods of time. They will remain stable in open system (presence of air) @ 170°C / 338°F. In closed systems, their service temperature is even higher.

Uses include: Damping Fluids, High Temperature Bath Fluids, Hydraulic Fluids, Dielectric Fluids, O-Ring Lubricants, Lubricants for gaskets, valves and seals.

*Silicone fluids can cause swelling in silicone o-rings.

Synonyms: PDMS, Dimethyl fluids, polydimethylsiloxane, Dimethylpolysiloxane
