Benefits of TankRover Inspection Method

- Improved inspection coverage
- No service interruptions
- No confined space entry

In-Service ROV Tank Inspections

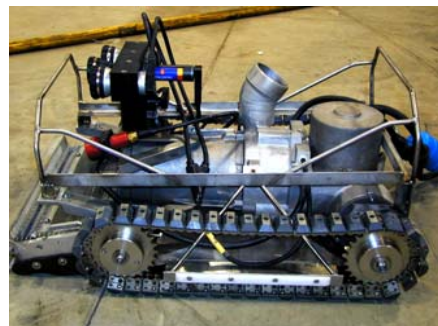

TankRover is a unique underwater remotely operated vehicle inspection system that offers the most thorough internal inspection possible with no downtime, safety or sanitary concerns.

Acuren offers the most thorough internal inspection possible. We conduct our inspections to the following standards; **AWWA C652, AWWA D101, NFPA-25.**

Acuren Inspector qualifications include; **NACE, API, STI and ASNT TC1a UTT**

Tank Cleaning Services

The **RoboVac** or **VR-600** can be used with inspections or as part of a routine cleaning program to maintain water quality. Tanks to be cleaned remain on-line and in-service during the cleaning process.

No turbidity is created due to the careful balance between speed of cleaning and rate of pumping. These robotic cleaning systems clean at a rate of approximately 200-1200 sq. feet per hour. The normal pump rate is 100-250 gpm.

Tank Management Services

New roof installation on Brown's Mountain Standpipe

Full containment lead removal tank Jayne Blvd. tank rehabilitation project.

We can provide you with prudent answers to all of your tank maintenance and management questions based on reliable industry technologies and practices.

We offer turnkey programs as a single source provider for your water storage facilities. We partner with the best coating manufacturers and application contractors, which allows us to manage costs and incorporate overlapping product and service warranties.

Whether you have one tank or 100 we can create savings in time and money for you.

We have provided tank management services to municipal water systems across the United States for over 15-years.
